

Products for your equipment and your brand

Product family	Configuration
Fiber enclosures	Interfaces, cable entries and grounding.
Cable assemblies	Connectors, cable construction and lengths.
Access terminals	Ports, optical splitting and mounting.

Product family	Configuration
Power distribution	Receptacles, cord format and brand presentation.
RF passives	Attenuation, interfaces and product identification.
UPS and backup power	AC UPS and DC backup: load, runtime and connections.

A broader offering as a starting point

Our offering also includes optical passives, transceivers and outside-plant hardware. Share your requirement even if the project is still being defined.

FROM REQUIREMENT TO SUPPLY

Configure the product and program

Work with one point of contact for selection, technical coordination and recurring supply. We coordinate with manufacturing partners against the agreed requirements.

Choose your starting point

Defined products for resale, integration or installation. Private label with your identity, instructions and packaging. Custom configurations of connections, cable lengths, enclosures or power.

Application	Configuration considerations
Fiber connection point	Interfaces, port count, entries, fiber slack and grounding.
Access distribution terminal	Ports, optical splitting, lengths and mounting.
Power accessory with your brand	Equipment refinement, branded boxes and launch materials.
Backup power solution	AC or DC input and output, load, runtime, connections and installation requirements.

Define and approve the version to supply

We help define the configuration for quotation, coordinate samples and documentation, and agree on identification and packaging. Approved specifications and designs serve as the reference for subsequent orders. We review the ratings and documents required for the destination market.

Send a reference product, photo, drawing or brief description with quantities and the destination market. You do not need a fully defined project to get started.

Let's discuss your requirement
